

PRESIDENT BIDEN'S FIRST TERM

BUILDING AMERICAN ENERGY INDEPENDENCE

The Biden Administration's plan for the clean energy transition is working: energy prices are low, domestic manufacturing is booming, and US greenhouse gas emissions are down. Let's dig in.

Clean Energy Capacity Added In First Term (GW)

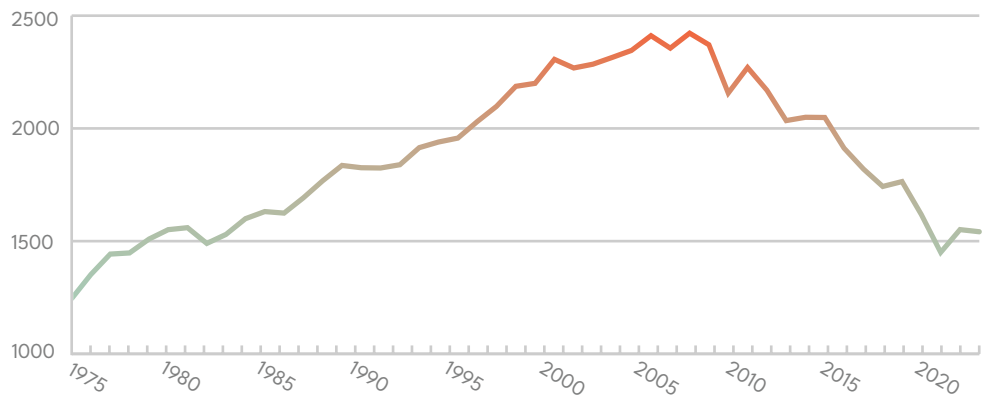

\$500 billion

invested in clean energy manufacturing and deployment, more than any first term president ever.

Emissions in the energy sector are the lowest they've been since 1975

(Million metric tons of carbon dioxide)

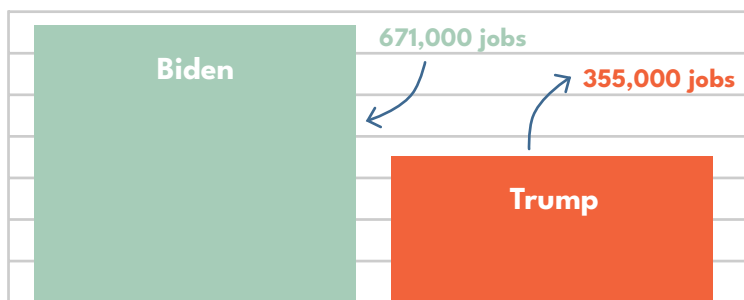

40%

of America's electricity comes from clean energy, more than ever before.

President Biden is building more clean energy, keeping costs down for families, and creating historic economic opportunities, moving us closer to genuine energy independence.

Manufacturing Job Growth

Oil production at all-time high
13.3 million+ barrels per day

Natural gas production at a record high
10% more than Trump's highest levels

Gas prices low and getting lower
Down 30% from summer 2022

Manufacturing is booming in America, roaring back from pandemic lows and surpassing pre-pandemic levels. Construction spending for manufacturing facilities is at a record high, creating more good-paying jobs across communities and ensuring a prosperous manufacturing sector for years to come.
