

Climate & Energy Communications Cheat Sheet 4/26/19

Jared DeWese, Former Deputy Director of Communications, Climate and Energy Program

We are huge champions of states forging their own fastest paths to reaching net zero emissions. Just this week, Washington state and Nevada joined climate leaders like California and New Mexico by implementing their own clean energy standards. In both cases, policymakers worked with local unions, industries, and community leaders to design their optimal strategy for eliminating carbon emissions--and in both cases they chose to leave the door open for a wide variety of clean energy resources to help get the job done..

We put together a twitter thread on this growing trend toward clean energy standards. Give it a read and share it with anyone who might be interested.
